

PRISTINEPRO

THE FUTURE, TODAY.

GREAT SOFTWARE FOR GREAT BUSINESS

PristinePro Technologies since its inception has been committed to deliver services that surpass excellence and tailored to cater the needs of an ever-evolving digital landscape. PristinePro Technologies designs, develops and delivers applications that drive today's businesses, ameliorate and enhance business capability, reduce customer acquisition lead times, accelerate top line growth, create better brand and ultimately beat competition. Our core management team with several years of experience in the field of software development and optimization, is able to provide the best in providing software development and testing services with quality and cost control. At middle level, we have competent e-business developers and e-consulting strategists having several years of experience in their particular domain. At action level, our employees are having deep knowledge of working in IT area.

Supported by excogitative research and development, PristinePro Technologies uses its strengths in technology, software, mobile as well as customer service to create new revenue-generating opportunities for its customers and at the same time reducing the overheads, while enabling them to quickly deploy and better manage and direct their businesses

OUR SERVICES

PRODUCT & ENTERPRISE APPLICATION

Applications and technologies that companies use in order to support their operational and strategic initiatives by focusing on the whole organization rather than single user.

WEB APPLICATION DESIGN & DEVELOPMENT

A Website is the face of your business. In today's digital world, it's the first step to land on if they'd want to search for your product/service. We aim to help introduce you to your consumers the best way that's possible.

MOBILE APPLICATION DEVELOPMENT

A way of securing a strong presence, ease of communication and so accessible that you'll literally be right in your customer's pockets.

TEST AUTOMATION FRAMEWORK

A testing framework is a set of guidelines or rules used for creating and designing test cases.

END-TO-END APPLICATION TEST SOLUTIONS

A software testing method that ensures an application works as expected for the end user by testing the different flows that a user might take from beginning to end.

SOFTWARE DEVELOPMENT LIFECYCLE PROCESS CONSULTANCY

Software Development Life Cycle (SDLC) is a process used by the information technology and software industry to design, develop, and test high quality software and code.

SOFTWARE TECHNOLOGY REVIEW

The most used resource by enterprise buyers and businesses helping vendors instil confidence in their buyers.
